

# nutri-san CATTLE

## SEAWEED ANIMAL FEED SUPPLEMENT

The bioactive seaweed compounds in **Nutri-San Cattle** deliver outstanding results in both dairy and beef applications while providing meaningful environmental benefits.

In dairy cattle, enhanced milk and dry solid yields can be expected, with a noticeable increase in milk quality. In beef cattle our formulation improves feed efficiency and nutrient absorption, leading to a significantly improved FCR.

By favourably impacting the microbial population of the gut, our seaweed-based supplements have been shown to support digestive balance and enhance rumen performance when included as part of general nutritional management.

As well as strengthening the immune system, the natural bioactives, minerals and prebiotic polysaccharides in **Nutri-San Cattle** supplements deliver improvements in growth rates, fertility, reproduction and condition.

From ocean to feeding trough, our seaweed blend provides a 100% natural and sustainable feed solution that enables animals and our planet to flourish.

### PROVEN BENEFITS

- Increases milk solids protein by up to 10.6%
- Improves fertility
- Shorter calving cycles
- Strengthens immune system
- Improves taste and texture in meat

**Inclusion  
rate**

**up to 0.5%  
of daily  
feed intake**

Feed.  
Flourish.  
Future.
